EDUCATION

University of California, Berkeley

Aug. 2023 – Present

Physics, Intended Computer Science

Berkeley, CA

- Relevant Coursework: Deep Learning for Visual Data, Advanced Programming in R, Data Structures, Mathematical Physics, Quantum Mechanics
- Activities: Launchpad AI/ML, Hands-On PCB Engineering Course Staff

EXPERIENCE

UC Berkeley, Department of Physics

Sep. 2024 – Present

Researcher

Berkeley, CA

- Conducting research on the emergence of In-Context Learning in wide neural networks using Neural Tangent Kernel theory
- Designing and evaluating deep neural networks within the kernel regime to assess their generalization capabilities

ExperienceFlow AI

May 2024 – Sep. 2024

Machine Learning Engineering Intern

Remote

- Reduced necessary training set size by 99% (from 5000 to 50) with minimal impact on performance by developing novel efficient machine learning techniques
- Designed, implemented, and evaluated recurrent neural network-based, deep Q-Learning, and SARSA techniques for predicting time evolution of finite state machines and maximizing rewards

Amazon

Aug. 2023 – Dec. 2023

Software Engineering Intern

Remote

- Developed K-means clustering algorithm in Java, improved unit test coverage (from 66% to 78%), and resolved critical data pipeline issues affecting over 1 million users in [ml-commons](#) repository
- Selected as member of 2023 OpenSearch Contributor Initiative, collaborating with industry professionals and Amazon Machine Learning Engineers worldwide to build an open-source data analytics and visualization platform

UC Irvine, Department of Physics & Astronomy

Feb. 2022 – Jul. 2023

Researcher

Irvine, CA

- Developed, trained, and tested deep learning models using TensorFlow/Keras to address data scarcity in high momentum collision analysis, achieving over 90% accuracy (compared to 80% previously)
- Simulated particle collisions with MadGraph, Pythia8, Delphes, and ROOT; designed and implemented reconstruction algorithms in C++ and Python, successfully predicting particle mass with less than 2% error

PROJECTS

Neural Navigator | *Graph Neural Networks, Recommender Systems*

- Developed deep-learning based recommender systems to recommend users activities and events in the Bay Area
- Implemented collaborative filtering with LightGCN and matrix factorization methods
- Built web application for user interaction using the React.js and Django frameworks

Research-Engine | *Natural Language Processing, Full-Stack Web Development, Flask, Web Scraping*

- Led team of 3 to develop a search engine that provides an overview of a topic and recent related research
- Deployed full-stack web application with Flask and Svelte hosted on AWS (EC2 instance)
- Implemented web scraping (Beautiful Soup) and natural language processing (BERT) to obtain and summarize information

SKILLS

Languages: Python, R, Julia, SQL, C, C++, Java, HTML/CSS, JavaScript

Frameworks: ROOT, Flutter, Flask, Mockito, ReactJS, React Native

Libraries: PyTorch, TensorFlow Keras, Pandas, NumPy, Matplotlib, SciKit-Learn, BeautifulSoup
